John R. Everett

(435) 301-6178 | john.everett32@gmail.com | johnreverett.com | linkedin.com/in/johneverett32/

I am an Information Systems student (3.97 GPA) and Data Analyst at Opiniion. Experienced in building predictive models, data products and pipelines as well as performing complex data analysis using Python (Polars/pandas) and SQL.

EDUCATION

Information Systems, STEM-Designated Sep 2024 - Apr 2027
Brigham Young University- Marriott School of Business *Provo, UT*

- 3.97/4.00
- Full Academic Scholarship 2025-2026 and 2026-2027 Academic Years
- Marriott School Dean's List: Fall 2024, Winter 2025, Fall 2025, Winter 2026
- Clubs: BYU Volleyball Club (officer), Association for Information Systems, Competitive Programming Club
- Volunteering: Teaching elementary school kids to code through guided lessons on code.org with Kids Who Code

Computer Science Major Aug 2021 - Apr 2022
Pepperdine University- Seaver College *Malibu, CA*

SKILLS

- **Data & ML**: Databricks (Fundamentals Certification), Snowflake, CRISP-DM, scikit-learn, pandas, polars, SQL, dbt
- **Visualization**: Shiny, Tableau, PowerBI, Excel, Omni, Databricks
- **Programming**: Python (Primary), R, C#
- **Tools**: Git, Azure, AWS, Docker, Jenkins, Posit Workbench, Agentic Harnesses
- **Languages**: Portuguese (fluent)

EXPERIENCE

Data Analyst Oct 2026 - Present
Opiniion *Lehi, UT*

- Developing gold level metrics and datasets for Databricks data lake using dbt to create deterministic and reliable data layer for AI and Omni
- Creating dashboards that directly guide financial reporting, budgeting, and planning for quarterly and annual goals and reflection
- Created metrics to calculate our TAM, SAM, whitespace, and SOM to identify our ICP and enable executives to adjust market strategy

Data Analyst Aug 2026 – Oct 2026
Brevium *American Fork, UT*

- Created an automated report using Python and SQL replacing a manual process, cutting time spent from 6 hours to minutes
- Performed feature engineering and statistical analysis to identify 20+ ideal attributes for patient-outreach templates
- Created a custom python package and vs code extension allowing automated internal warehouse querying and data product development

Data Analytics Intern May 2026 – Aug 2026
Sunoco LP

- Led Databricks implementation by creating data lake and developing Genie Agents for pricing analysts *Dallas, TX*
- Developed composite machine learning model to predict price elasticity of over 500 gas stations
- Created cost model and slide deck comparing profit levers for executive strategic meetings about a pilot commercial program
- Solo-developed Shiny Python dashboard used daily by team handling operations totaling ~50% of company EBIDTA

Software Developer Mar 2024 – May 2026
Brigham Young University *Provo, UT*

- Developed and improved HVAC systems for over 100,000 alarms and history trackers
- Enhanced data integrity by engineering SQL queries to audit and sync missing histories across 100+ systems
- Engineered a full-stack overhaul of the A/C shop website to enhance integration/usability

Volunteer Representative – Portuguese Fluency Aug 2022 - Aug 2024
Church of Jesus of Latter-Day Saints *RS, Brazil*

- Worked 60-80 hour weeks training, teaching, and serving the local community
- Led groups of 4-20 people from 11 nationalities through goal setting, trainings, and presentations

PROJECT EXPERIENCE

Predictive Maintenance Vibration Sensor (Student Innovator of the Year Competition):

- Engineered a hardware-to-software pipeline for real-time anomaly detection in industrial motors.
- Processed NASA bearing datasets using Polars for feature engineering (RMS, Kurtosis, Crest Factor).
- Trained and deployed Random Forest models to predict mechanical failure before it occurs.

MLB Prediction Pipeline and Web Application:

- Gathered and cleaned data from several sources and performed feature engineering for 37,048 games and 64 features
- Rigorously researched and tested different models and approaches to achieve a brier score of 0.2323 and log loss of 0.6598
- Developed risk management process that uses trained model to achieve a current ROI of +8.79% through 50% of 2026 season
- Self-hosting a fully automated data and betting pipeline with 150+ settled bets and web app for real-time and historical performance tracking
